

# Arcall 660 Top Spray Head Upgrades

*Top spray head with 600i technology*

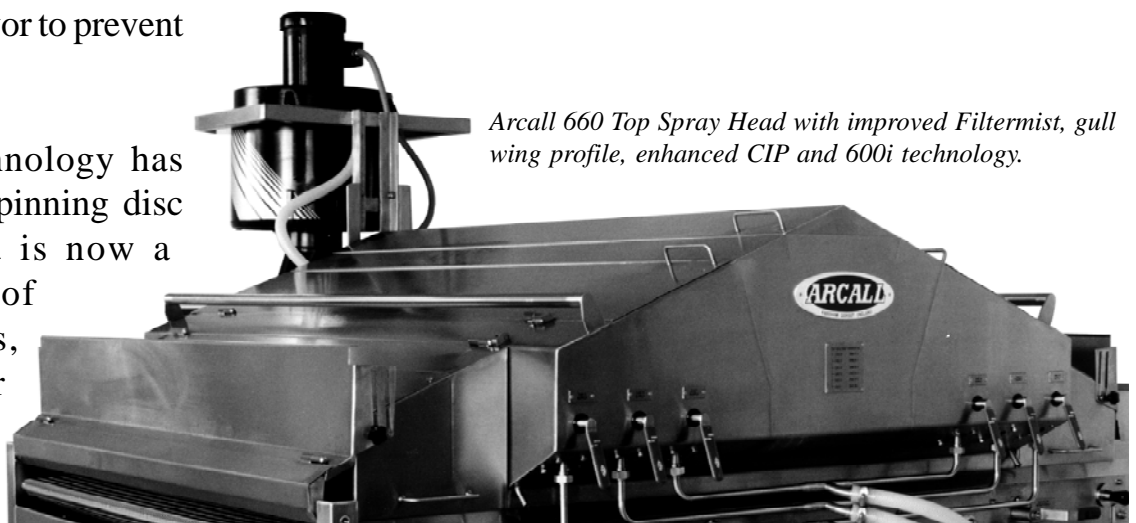

**A**t Arcall we believe in a continuing relationship with our customers. Many of our product improvements can be offered as modification packages for previously supplied machines.

In recent years there have been a wide range of advances made to the Arcall 660 Standard, especially in the spray head area, such as the 600i technology. Arcall are offering these as an entire new top spray head, each designed to fit to the existing conveyor.

The older the Arcall machine the more advantage potential to be gained in accuracy, hygiene, and waste reduction.

**A**mongst the design advances is an improved Filtermist extraction system, giving better and more reliable oil containment (reducing waste and so saving money). For those machines fitted with CIP enhanced cleaning is now available, with sequencing valves and containment flaps at each end of the machine's conveyor to prevent spillage.

The new 600i technology has revolutionised the spinning disc spray method and is now a standard feature of Arcall's designs, giving better accuracy, hygiene, cleaning and maintenance.

*Arcall 660 Top Spray Head with improved Filtermist, gull wing profile, enhanced CIP and 600i technology.*

**Engineering Quality For Food**
